

Part1: Task 1

I have started this Data Science Bootcamp to upgrade myself and start doing freelance work to broaden my reach and scope of work to different fields of industry and work with small and medium size businesses to provide them with efficient data visualisation and analysis using Python. This will help me achieve experience in a number of fields and at the same time provide much needed support to these businesses who do not have the required in-house skills.

Due to the Massive shortage of these skills I would be able to get higher paying jobs and my skills would also be in high demand making it a successful career choice for me with the possibility of many of these jobs being contract jobs that lead to becoming a permanent employment opportunity.

I have investigated multiple freelance companies that have this profile in high demand such as Upwork, Proxyfi, Fiver and Linkedin which have more than 70 freelance data science jobs available in England and more than 4000 worldwide, on Linkedin alone.
